

- 32 pin socket
- Compact housing made of composite
- Gas injection operating up to 4 cylinders
- Switch with selection of sounds and colour display
- Corrections based on gas and reducer temperature, gas pressure, RPM
- Self-diagnosis, detection for errors and installation faults
- Operation with engines type "valvetronic"
- New hardware platform based on fast processor
- Operation for extra petrol injection
- Automatic detection for petrol injection type
- Reading for RPM and ignition signal from petrol injectors pulses

## TECH DUO CONTROLLER

**TYPE:** LPG/CNG Injection Controller

**MODEL:** TECH DUO

TECH DUO combines proven solutions, a compact housing with easy-to-install harness and advanced features that meet the needs of modern engines.

TECH DUO is a new controller of the family dedicated to 4-cylinder engines with indirect fuel injection. The controller works with a new touch switch RGB, which allows for any color configuration. All enclosed in a small and compact housing with a 32-pin connector that allow the installer to fit in the place that suits us most.
